Brave browser android crashes

Support and Troubleshooting Mobile Support Description of the issue: After a change to the OS language on an Android device with Brave and Brave Rewards set up, Brave appears to crash when trying to send ad notifications. How can this problem be reproduced? Set brave browser and Brave Rewards on an Android phone Change the language of your phone Brave ad notifications will no longer be received. Depending on your device, Brave can also be reported to be crashing in the background, despite no evidence of crashes, apart from the lack of ad notifications. Expected result: I would expect Brave to continue to send ad notifications no matter what language the phone is in, and would expect him not to crash when trying to do so after an OS language change Brave Version(check About Brave): Brave 1.7.0 Mobile device details Samsung Galaxy S10e with Android 10, January security patch. Additional information: The only evidence I have of Brave crashing is Samsung's Device Care functionality, which suggests apps to fall asleep. After an os level language change, Device Care eventually starts to suggest Brave be put to sleep because of what it claims is constantly crashing the app. These crashes only seem to happen in the background, and I think it crashes when trying to send ad notifications. Resetting Brave Rewards with the phone in the language I was changed allows me to receive ad notifications, but if I change language again, the crashes will be reported again in device care. I should note that I also encountered an error resetting Brave Rewards, despite the fact that it seemed to reset. tell you which language the device was set up on first and in which language did you change it? Also, was Brave running in the background when you tried changing the language? Were there ads in the notification slide when the landgeving was changed? The phone was originally in English (US), and then was changed to Japanese. The second time this happened, when I reset Brave Rewards, the phone went from Japanese to English (Canada), and then back to Japanese. Brave was not running in the background, and I had no ad notification in the notification tray at the time in either case. This topic was automatically closed 30 days after the last answer. New answers are no longer allowed. Support and Troubleshooting Mobile Support Description of the problem: Brave crashes, clear and simple. How can this problem be reproduced? Expected result: Brave not crashing, Brave Version(check Over Brave): 1.12.113 Mobile device details: Android 10; motorola one Build/QPKS30.54-22-10 Additional information: in the following video I interacted with the browser, but then I found out that there is no trigger to make it crash (i.e. just open it is enough) 1 Like Fixed it by restarting my device. EDIT Today came back to the issue. I don't really need it. Need. As long as Brave Beta works, but I hope you guys release an update sooner or later. Let me know if I can give you more info. 1 Like Same happened here on iOS, but if you go back to you to normal this topic was automatically closed 30 days after the last answer. New answers are no longer allowed. It just randomly crashed a little earlier and every time I try and start it now it crashes as soon as I open it. I have the latest version. Page 2 27 comments Support and Troubleshooting Mobile Support Description of the problem: Brave for Android keeps crashing in the background, if I don't use it and I have to force the app into the setting for it to stop. How can this problem be reproduced? Open Brave Change App or go to Android Home Menu Expected result: Android shows an error message saying Brave crashed and asks if I want to close the app or send feedback. Brave Version(check About Brave): Brave 1.5.1, Chromium 78.0.3904.96 Mobile Device details Android 8.0.0; LG G6 Additional information: [Edit] I've enabled Brave Rewards and Brave Notifications. Is synchronization enabled? If you turn off Rewards, does the crash stop? Hey, sorry for the late response, I was testing what you told me and it looks like it worked. I only have one crash in these 5 days vs the 5 crashes a day I got with Rewards enabled. Thank you! Ok you try one more thing for me please. Re-enable rewards, clearly browse the app's data and then go to settings->apps->Brave-> force stop the app and then reboot the app and check if it's still the cause of the hi sriram crash, I've been using Brave after doing what you wrote, but unfortunately it looks like the crashes back. It seems that it has to do with rewards being enabled, still just a crash when rewards were off. I see you at 1.5.1, Can you try updating Brave to 1.5.2 and see if the crashing continues? Support and troubleshooting Desktop Support Description of the problem: Click On Brave icon and a window flashes open briefly, not even long enough to fill, just white, before it immediately slams shut. Click again and, more often than not, the browser will actually open... although it sometimes takes more than two attempts. How can this problem be reproduced? Random coincidence and roll of the dice best I can determine. It happens intermittently, which is a for trying to detect a problem. Today, it happens repeatedly, but again, not every time. Yesterday it wasn't a problem at all. Last week/month/etc..., sometimes it behaves like today. Tomorrow? Next week? Who knows! Expected result: By this I assume you mean what I expect I I push the icon to open the browser? Well, that the browser actually opens and doesn't close immediately, or that it won't make two or three attempts to keep it. Brave Version(check About Brave): Version 1.10.97 Chromium: 83.0.4103.116 (Official Build) (64-bit) Additional information: Operating system is Windows 10 Thanks in advance for your help. VictorZ Hi @VictorZ, Have you enabled sync? Thank you for your reply. In response to your question ... I don't think so... Or I have to say, I'm pretty sure not. I tried to sync my phone and desktop when initially started to use Brave oh this many months ago, but gave it up if it didn't work as expected, or many not at all, it was buggy, etc. etc.... So, simple answer ... No, but I may be wrong and it's somehow activated on the desktop without my knowledge. BTW, this issue is exclusively on the Windows Desktop version and I don't even know where the sync setting is if it doesn't (obviously) appear on the settings menus like it does in the Android version. Incidentally, if I look at the sync option on the phone version, only that device is listed as the bottom entry with two empty entries above it... I'm not sure what that implies, but I assume that means there is no sync chain set up. Also, if I try to remove this device (again, on the phone) nothing happens. Vat... It sounds like Sync 2.0 can actually work, so I'm definitely looking forward to that. Greetings, VictorZ Can try the following steps: Quit Brave Open Command Prompt Enter: C:\Program Files (x86)\BraveSoftware\Brave-Browser\Application\brave.exe--disable-gpu I have run the 1st command and I will have to let you know how it goes as far as the problem is not perfectly consistent. It happens often, but it still happens intermittently. As far as the 2nd command ... I've previously disabled Use hardware gear... in the program settings and that is the current setting. I assume this achieves the same thing? In any case, I did so because I had seen this suggested as a solution to certain problems with Chrome in the past. Tried it, but it didn't help. I'll leave it off for now and see what the effect of #1 is for the moment. Many thanks again for your help. VictorZ Problem is when brave crashes all open tabs are lost and my BAT are reduced This has happened to me more than 5 times in a month and the last one today reducing the No. of the ads to 0 together--with reduction of the estimated BAT BAT reduced ads reset to 0 Well, I've tried both commands and it's still closing (crashing?) when opening sometimes ... maddeningly random so it seems. Sometimes it works as expected, often not. Not sure what to make of Ridz comment above re. losing BAT as a result, tho I can say I had noticed that the number of ad notifications received in the month continues to reset. Reset seems to be related to this, because it's ZERO from the moment, and I've just been in after a crash/close. Of course, it's the beginning of the month, but the 7-day ad history shows some in the last few days. I've been concerned about this behavior over the past month... I brought it into an unrelated conversation with someone regarding BAT to be donated from my account even tho I didn't ask or authorize it. He (steeven) took care of that problem, so I brought this strange behavior at that time. I think I'll just have to see what happens in a few days when the next grant takes place. Incidentally, the losses count of ads seems to be happening in both the desktop and android versions... the count just randomly (I hate random problems!) resets to zero. Ach... thanks for the help and hope there is something else to try as a fix. VictorZ Had the same problem as others: click to open Brave, the window flashes up briefly and disappears. All tabs , including pinned tabs, are lost. Great pain in the a. I found a way to fix

the Brave crashes at startup, but it's kind of violent. Here's what I've already answered on Reddit about that: On Windows 10, I went to the C:\Users\{my Username}\AppData\Local\BraveSoftware\Brave-Browser\User Data\Default, moving everything to a new old_data folder, starting Brave again (it didn't crash this time) and moving files Bookmarks and Cookies to their original place. Although I had to reinstall my extensions and language settings, it started working again. I hope this helps! Some people suggested changing the shortcut to disable synchronization, but it didn't work for me: Brave Direct Crashing on Windows 10.1 Like THANK YOU!!! spj: I found a way to solve the Brave crashes at startup, but it's quite violent. ME: Hehe... you weren't kidding SOLUTION: spj: On Windows 10, I went to the C:\Users\{my Username}\AppData\Local\BraveSoftware\Brave-Browser\User Data\Default, moving everything to a new old_data folder, starting Brave again (not crashing this time) and moving files Bookmarks and Cookies to their original place. Thanks again for this recommendation! Right now, my browser has been restored with my BOOKMARKS intact. Had no stored passwords or personal information because I offload these responsibilities on other apps. (shout out to KEEPASSXC). Also, I had to re-add all my extension again, as you said. But HEY! I got my browser back! I'm glad I could help you This topic was automatically closed 30 days after the last answer. New answers are no longer allowed. Allowed.
